

Brisbane Convention & Exhibition Centre's Carbon Calculator

Our way of supporting your efforts to reduce the environmental impact of your event

BCEC now offers the services of a tailor made carbon calculator delivering clients the opportunity to stage carbon neutral events.

The online calculator is a free service provided by the Brisbane Convention & Exhibition Centre to assist clients in taking action to reduce the impact of their events on the environment.

Designed in conjunction with the Carbon Reduction Institute (CRI) the Carbon Calculator takes into account room occupancy, menu selection, event services and is applicable for all events.

If requested, the Centre will also source high quality carbon credits to offset the emissions from your events through the Centre's two partners, Climate Friendly and Carbon Reduction Institute, both of whom are ranked among Australia's leading offset providers.

The online Carbon Calculator is easy to access, our staff do all the hard work for you. Just talk to your Sales or Event Planning Manager or for more general information on the Centre's many green event management initiatives visit the Venue & Services pages on our website at www.bcec.com.au

One of the events to use the Carbon Calculator:

'The Carbon Calculator made our decision to build a carbon neutral event very easy, with detailed documents from the Carbon Reduction Institute explaining how every aspect is worked out.'

2009 Queensland Sustainability Industries Awards

A number of our clients have achieved considerable success with the use of the Carbon Calculator, by incorporating the cost of purchasing carbon credits in the registration or ticket price of their events. In this way they not only achieve their environmental performance objectives but also tick the right boxes for engaging the audience in a community initiative. Such a levy can be as little as \$2 per person.
